

Available Software Tools

Several software tools are available to help you with Utility Bill Tracking, Benchmarking, and Trend Logging. Local electric and gas utilities offer some of these tools to their customers, in many cases at no charge. The US Environmental Protection Agency (EPA) offers a free tool. Other tools are available for a fee from commercial software developers.

The table below summarizes the capabilities of each software tool. Click a software title to view or download a PDF file that contains a detailed feature list and a link to the web site of the software developer or provider.

If you want to know more about a utility's software tool, but do not know which utility serves your building, find your utility here.

	Software Capability		
	Utility Bill Tracking	Bench-marking	Trend Logging
